Power BI Project : Bank Customer Segmentation

Dear Innominion,

Congratulations on completing your Power BI journey! It's time to take the next step and turn insights into real-world impact. Let's dive into project-based learning and showcase your skills with data storytelling!

Data Source

👉 Kindly click on the [Dataset](#) to check and download

Data Description

TransactionID – Unique ID assigned to each individual transaction.

CustomerID – Identifier linking each transaction to a specific customer.

CustomerDOB – Date of birth of the customer, useful for calculating age.

CustGender – Gender of the customer (e.g., Male, Female).

CustLocation – Geographic location or city of the customer.

CustAccountBalance – Account balance at the time of the transaction.

TransactionDate – The date when the transaction occurred.

TransactionTime – The exact time the transaction was executed.

TransactionAmount (INR) – The amount of money involved in the transaction in INR.

Reporting Instruction:

Try to create reports that include a variety of visual elements such as **cards, bar charts, column charts, scatter plots, waterfall charts, funnel charts, slicers, tables, matrix visuals, pie/donut charts, boxplots etc** wherever applicable to make the analysis more interactive and insightful.

Additional Note:

If you have space in your dashboard, feel free to add extra cards, slicers, or any other relevant visuals. You are encouraged to create your own questions and insights beyond the ones provided. There is no rule that you must stick only to the given questions, explore and expand creatively.

Analysis Questions

1. Customer Demographics Analysis

1. What is the total number of customers?
 2. What is the average age of customers?
 3. How many male and female customers are there?
 4. How many unique customer locations are there?
 5. What is the gender distribution among customers?
 6. How are customers distributed across different age groups?
 7. Which locations have the most customers?
 8. How does the gender distribution vary across different age groups?
 9. What is the detailed list of customers, including their gender, location, and age?
 10. How can customers be selected based on age group, gender, or location?
-

2. Transaction Behavior Insights

1. What is the total transaction volume?
2. What is the average transaction amount?
3. What is the highest single transaction value?
4. What is the average account balance across all customers?
5. How has the transaction volume changed over time?

6. What is the average transaction amount across different age groups?
 7. On which days and at what times do most transactions occur?
 8. What is the daily transaction activity including amount and time?
 9. How can transactions be filtered by date, time, or transaction range?
-

3. Customer Segmentation Analysis

1. How many loyal customers are there?
 2. How much revenue is generated from new customers?
 3. How many lost customers are there?
 4. Which segment has the highest average revenue per customer?
 5. How are customers distributed across segments (Loyal, New, Lost)?
 6. How does total revenue differ across customer segments?
 7. Which customer segment has the highest transaction frequency?
 8. Which age groups are most common within each customer segment?
 9. How are RFM scores distributed across different customer segments?
 10. How can customers be selected based on segment, age group, or gender?
-

4. Profitability & Risk Indicators

1. What is the total customer revenue?
2. What is the average credit score of all customers?
3. How many high-risk customers are there?
4. What is the total monetary value generated by customers?
5. What is the average credit score across different customer segments?
6. How are customers distributed across different risk levels?
7. How does credit score distribution vary across customer segments?

8. Is there any relationship between account balance and risk level?
9. How does the total value score differ across customer segments?
10. Who are the top 10 high-revenue but high-risk customers?
11. How can customers be filtered based on credit score range, risk level, or value score?
